LEARN WITH LEADERS

Domain Consolidation & Search Strategy

Site by site, page by page

Nine web properties. One brand. This document sets out exactly which pages move where, in what order, and what has to be built before a single redirect goes live.

Prepared 27 August 2026

Domains covered: learnwithleaders.com · lwlschoolaccess.com · futuredoctorsprogram.com · futurelawyersprogram.com · joinfinlit.com · joinonwards.com · sirluthercenter.com · satinstinct.com · purposeplaybook.ai

1. Executive summary

Learn with Leaders currently sells eighteen programmes across nine web properties. Google treats those nine as nine unrelated businesses. Each one competes with the others for the same parent searches, each one carries a fraction of the brand's authority, and none of them is strong enough to win a competitive term.

The evidence is in Section 2, but the headline is this: 394 live pages were catalogued across the nine properties, and the whole estate generates roughly 227 organic visits a month. Almost all of it comes from blog articles on satellite domains that never mention the programmes they were built to sell.

The crawl also surfaced something a sitemap-based audit cannot see. Four of the seven satellites - joinonwards.com, satinstinct.com, purposeplaybook.ai and the non-blog half of sirluthercenter.com - serve one identical HTML shell for every URL. Their real content only appears once JavaScript runs. That is 146 pages, including a 12,215-word student projects page and a 6,738-word library of published student research, that Google has effectively never read. It is the strongest argument in this document for the merge: the destination app renders every page on the server.

> **The three decisions this document asks you to make**
>
> 1. Which domain is the permanent home. This document assumes learnwithleaders.com, because it holds the brand rankings, the backlinks and the press coverage. Every mapping table depends on this choice.
>
> 2. What happens to the fifteen products that exist on satellite sites but are not in the eighteen-programme catalogue - five masterclass funnels, three camps, the pre-med club, the Global Impact Fellowship, the Moot Court Championship, the Business & Finance Challenge, Onward LaunchPad, the FinLit Lab and Project Impact.
>
> 3. Whether the 21 school and region landing pages on joinonwards.com move with the merge or stay as a separate sales estate.

What the merge actually does, in plain terms: every old page issues a permanent (301) redirect to its true equivalent on the new domain. Google reads that as 'this moved forever', transfers the old page's history to the new one, and within a few weeks swaps the old address out of search results. Nothing is lost - provided the destination page is genuinely equivalent and genuinely better.

What to expect

Phase	Timing	What happens
Preparation	Weeks 1–6	Build hubs, migrate blog content, ship the sitemap. No redirects yet, no risk.
Pilot cutover	Week 7	One small domain (satinstinct.com) redirects. Two-week observation.
Rolling cutover	Weeks 9–16	Remaining domains in pairs, largest last.

Phase	Timing	What happens
Dip	Weeks 2–6 after each cutover	Expect a 20–40% drop on the moved pages while Google reprocesses. This is normal.
Recovery and growth	Months 3–6	One domain now holds all content, all links and all internal linking. Past the sum of the parts.

The single highest-return action in this entire document is not a redirect. It is migrating the 93 blog articles - starting with sirluthercenter.com/blog/science-fair-project-ideas-for-high-school-students, which alone holds 99.95% of its domain's organic traffic - onto the new domain and linking each one to the programme it supports. Those articles already rank. They currently sell nothing.

2. What we actually found

Every figure below comes from a full crawl of all nine properties carried out for this document - not from their sitemaps. Each domain was crawled link by link, and the five that serve no HTML to a plain crawler were then re-read in a real browser, page by page, so their true titles and content could be recorded. 394 live pages were catalogued in total: 268 across the seven satellites, 126 on the hub. Traffic figures come from Semrush's US database and read low against real analytics; use them for relative comparison, not as visit counts.

2.1 The estate at a glance

Domain	Role	Pages found	Keywords	Est. traffic	What the crawl showed
learnwithleaders.com	Brand hub (WordPress)	126	189	144/mo	Strongest asset. Ranks #1 for the brand. 12 invalid paths serve the homepage at HTTP 200.
lwlschoolaccess.com	This catalogue app	31	not indexed	-	Best structure, newest, no history. Target destination.
sirluthercenter.com	Research satellite	66	87	44/mo	37 blog posts carry effectively all of it. Programme pages rank for nothing.
joinonwards.com	Multi-track satellite	58	6	0/mo	Largest satellite by pages, weakest by visibility. Entirely client-rendered.
satinstinct.com	Test prep satellite	51	4	0/mo	Rich content, zero crawlable HTML. Google sees one shell page.
futuredoctorsprogram.com	Medicine satellite	50	40	22/mo	29 blog posts. Ranks #3 for 'future doctors program' - against our own hub at #2.
joinfinlit.com	Finance satellite	24	60	17/mo	/competition at #3 for 'finance competitions' is the estate's best commercial ranking.
futurelawyersprogram.com	Law satellite	11	18	0/mo	Positions 5–15 for Harvard pre-law terms. Nothing converting yet.
purposeplaybook.ai	Project-ideas satellite	8 + 207	no data	-	207 client-rendered project URLs with no crawlable titles. Invisible to search.

2.2 Finding one: you are competing against yourself, and you are winning both places

For the search 'future doctors program', learnwithleaders.com ranks #2 and futuredoctorsprogram.com ranks #3. For 'harvard future doctors program', they hold #1 and #2. Two of your own properties are splitting the same demand, and the parent who lands on the satellite sees a different brand, different design and a different application form than the parent who lands on the hub.

The same duplication runs through the whole estate: 'future changemakers', 'yale international relations association' and 'harvard summer camp' all resolve to hub pages, while the satellites hold their own thinner versions of the same programmes.

2.3 Finding two: all the traffic is in the blog, none of it is in the programmes

Page	Position	Search volume	Share of its domain's traffic
sirluthercenter.com/blog/science-fair-project-ideas-for-high-school-students	#3	22 ranking keywords	99.95%
joinfinlit.com/competition	#3	'finance competitions'	41%
joinfinlit.com homepage ('finlit')	#7	brand term	53%
futuredoctorsprogram.com/blog/what-does-pre-med-actually-mean	#30 / #40	1,900/mo and 6,600/mo	~9%
futurelawyersprogram.com homepage	#5	'harvard future leaders in law'	No measurable traffic
Every other page across all seven satellites - 260 of 268	-	-	Effectively zero

Two of those three top pages are articles, not programme pages. 'What does pre-med actually mean' sits at position 30 for a 6,600-a-month keyword - that is a page one placement waiting to happen on a stronger domain, and it is currently stranded on a domain with 40 keywords total.

2.4 Finding three: the backlink profiles are mostly spam

> **Warning - audit links before you inherit them**
>
> learnwithleaders.com shows 8,533 backlinks from just 354 domains. The top seven referring domains are link directories (directory9.biz, prolink-directory.com, aurora-directory.com and similar), contributing over 6,800 links with exact-match commercial anchors such as 'medical program for high school' (4,713 links from 2 domains).
>
> sirluthercenter.com has 34 backlinks, and its most common anchor text is literally an advert for a PBN backlink service.
>
> Practical consequence: the link equity you are consolidating is close to worthless, and some of it is actively risky. Do the merge for content and clarity, not for links. Run a link audit on the destination domain before cutover and prepare a disavow file. Do not buy any more links.

2.5 Finding four: five of the eight sites are invisible to a crawler

This was the most consequential discovery of the crawl. joinonwards.com, sirluthercenter.com (its non-blog pages), satinstinct.com and purposeplaybook.ai are all single-page applications: the server returns one identical HTML shell for every URL, and the real title, headings and copy only appear after JavaScript runs in a browser.

Domain	What a plain crawler receives	What a browser actually renders
joinonwards.com	All 58 URLs: title 'Onward Fellowship | World's First G&T Prep', 850 words, identical	58 distinct pages, 840–12,215 words, including a 12,215-word student projects page
sirluthercenter.com	29 non-blog URLs: title 'Sir Luther Center | 426+ Students Published', 473 words, identical	29 distinct pages including a 6,738-word published-papers library
satinstinct.com	Home page only, no followable links; the earlier crawl found exactly one page	51 pages including 20 blog articles and an 11-trap pillar guide of 2,588 words
purposeplaybook.ai	215 URLs with the same title; project pages carry 13 words	207 project pages of ~250 words each, plus a 5,992-word library index

Why this changes the plan, not just the paperwork

Every H1 on joinonwards.com renders as 'Onward Fellowship - World's First G&T Prep for Grades 5-12', on all 58 pages. Google is being handed 58 near-identical documents.

This is the real reason these domains rank for nothing, and it is a stronger argument for the merge than any link-equity argument: the destination app server-renders every route, so the same content will finally be readable.

It also means content cannot be 'copied across' by scraping. Anything migrated from these four domains has to be pulled from a rendered browser view or from the source project - budget for that.

Practical upside: because Google has effectively never seen these pages, there is very little ranking to lose in moving them. They should go early.

2.6 Finding five: the hub has no technical SEO foundation at all

- learnwithleaders.com returns an HTML page for /robots.txt and /sitemap.xml - meaning neither file exists. Crawlers are navigating it blind.
- This catalogue app (lwlschoolaccess.com) has no sitemap either, and only five of its routes declare a canonical URL - three of them relative, two absolute, pointing at two different domains.
- Only joinonwards.com publishes an llms.txt - the file AI crawlers read first. Ironically it is the domain with the least crawlable content to describe.

2.7 Finding six: the hub is serving its homepage under a dozen wrong addresses

The crawl found twelve URLs on learnwithleaders.com that return HTTP 200 with the homepage's exact title and 2,969-word body. These are soft 404s: Google indexes them as real pages, then sees a dozen duplicates of the homepage.

URL returning the homepage at HTTP 200	What it should do
/mentors/grace-li-2, /mentors/tomoki-matsuno, /mentors/albie-giandomenico, /mentors/héctor-martínez	Return 404, or restore the mentor profile - three other /mentors/ URLs already return a correct 404

URL returning the homepage at HTTP 200	What it should do
/camps/index.html, /conference/index.html, /conference/apply.html, /offline-programs/form.html	301 to the real /camps, /conference and enquiry pages - these are legacy file paths
/certificate_programs/research-scholars-program-dec	301 to the live programme page or 410 if the cohort is retired
/gallery/virtual-programs, /blog-media/faq	301 to /gallery/virtual-events and the FAQ page respectively

Separately, ten conference pages (/conference/hwmun-dubai, hwmun-vietnam, harvardworldmun-india, harvardworldmun-kazakhstan, harvardworldmun-indonesia, harvardworldmun-bangkok, hwmun-cambodia, hwmun-abu-dhabi and two more) all publish the identical title 'Harvard World Model United Nations'. They are competing with each other for the same term. Each needs its city and year in the title before the merge, or they will carry the problem onto the new domain.

3. Ground rules for every redirect

These are not preferences. Break any one of them and the merge loses the value it was meant to protect.

1. 301, never 302. A 302 tells Google the move is temporary and it keeps the old URL indexed indefinitely.
2. Server-side only. JavaScript redirects and meta-refresh tags are not reliably followed and pass little or no equity.
3. Page to page, never bulk to homepage. Google discards the history of a redirect whose destination is not a genuine equivalent. A homepage-dump merge is functionally the same as deleting the site.
4. One hop. Old URL to final URL directly. Every extra hop loses a little and risks a loop.
5. The destination must be at least as good. If the new page is thinner than the one it replaces, rankings fall and do not come back. This is the most common way merges fail.
6. Redirects are permanent infrastructure. The old domains must stay registered and pointed for years, not months. Budget for it.
7. Never redirect a live application or login flow. Move the product first, then the URL.
8. Nothing goes live until the destination is indexable. Confirm no noindex, correct canonical, present in the sitemap.

> **The rule that will be tested**
> Roughly a third of the URLs in this document map to a page that does not exist yet. That is deliberate: the mapping tables describe the end state. Section 4 lists everything that must be built first. Do not shortcut it by pointing those redirects at the homepage.

4. What has to be built first

The destination app has thirteen routes plus eighteen programme pages. The 268 satellite URLs mapped in Section 5 need the twenty-one additions below. None of them are cosmetic - each is the true equivalent of pages that are live today.

New page	Type	Absorbs
/medicine	Subject hub	futuredoctorsprogram.com home, /programs, /camps, /harvard-camp, /pre-med-club
/law	Subject hub	futurelawyersprogram.com home (3,451 words, already written)
/finance	Subject hub	joinfinlit.com home + /lab + /scholarship
/research	Subject hub	sirluthercenter.com home + /ask-the-mentors + /project-10k
/leadership	Subject hub	joinonwards.com home + /how-it-works + /outcomes + region cohorts
/test-prep	Subject hub	satinstinct.com home + /free-resources
/guides + /guides/<slug>	Article library, 93 posts	37 sirluthercenter + 29 futuredoctors + 20 satinstinct + 4 finlit + 3 futurelawyers
/guides/student-project-ideas	Filterable list page	purposeplaybook.ai /library and its 207 project URLs
/research/published-papers	Proof library	sirluthercenter.com/papers - 6,738 words
/research/topic-finder, /research/journals	Interactive tools	sirluthercenter.com/topic-finder, /journals
/medicine/mmi-coach	Interactive tool	futuredoctorsprogram.com/mmi
/<subject>/student-projects (x3)	Outcome proof	onwards /projects (12,215 words), fdp /project-showcase, finlit /lab
/<subject>/masterclass (x5)	Live lead magnet	Five satellite masterclass funnels, currently off-catalogue
/programmes/moot-court-championship	New programme page	futurelawyersprogram.com/competition
/programmes/global-impact-fellowship	New programme page	sirluthercenter.com/impact-fellowship (16 weeks)
/programmes/business-and-finance-challenge	New programme page	joinfinlit.com/business-fin-challenge
/programmes/onward-launchpad	New programme page	joinonwards.com/competitions (AI startup competition)
/for-schools + /for-schools/<partner>	Schools and partners	onwards /for-schools + 11 partner pages, finlit /for-educators, slc /schools + teacher resources
/apply	Single shared intake	All 17 satellite /apply pages
/privacy, /terms	Legal	joinfinlit and sirluthercenter legal pages
/sitemap.xml, /robots.txt, /llms.txt	Technical	Missing on the hub; llms.txt exists only on joinonwards.com

4.1 Why the subject hubs matter more than they look

A satellite homepage does not rank for a cohort. It ranks for a category: 'harvard pre law program', 'finlit', 'future doctors program'. Send that traffic to a single programme page and you narrow it; send it to the finder and you dump the visitor into a filter UI. A subject hub is the only honest destination - the subject's story, who it suits by grade, the programmes inside it, upcoming dates, FAQs, and links down into each programme page.

Each hub should carry the language its satellite ranked for. /law needs to talk about Harvard pre-law and mock trial in its own words, because that is the query it inherits.

4.2 The guides library is the real prize

Ninety-three articles were catalogued across the satellites, and they hold effectively all of the estate's organic traffic. Migrated onto one domain, cross-linked, and each one ending in a relevant programme call to action, they become the top of the funnel the business currently does not have. Keep the slugs identical wherever possible so the redirect is a clean one-to-one.

4.3 Two pages that are quietly load-bearing

- /research/published-papers - the library of published student work on sirluthercenter.com. It is the most concrete proof the business owns, it is what parents forward to each other, and it is exactly the kind of verifiable fact AI answer engines cite. Rebuild it, do not fold it into a testimonial carousel.
- /research/topic-finder - an interactive lead magnet that captures intent before a parent is ready to apply. Redirecting it to a static page throws away the tool and the leads.

5. Domain by domain

Each chapter below gives the domain's current search position, what must be absorbed before it can be switched, and the complete page-level mapping table. Destination paths are relative to the canonical domain chosen in Section 1.

5.1 futuredoctorsprogram.com

Medicine satellite - 50 live pages, 29 of them blog articles. 40 keywords, ~22 visits/mo. Server-rendered, so everything here is genuinely indexed.

- Ranks #3 for 'future doctors program' and #2 for 'harvard future doctors program' - both terms the hub also ranks for. This is the clearest self-competition in the estate.
- /blog/what-does-pre-med-actually-mean sits at position 30 for 'what is pre med' (1,900/mo) and position 40 for 'pre med' (6,600/mo). It is 535 words. On a stronger domain, expanded, this is the biggest single upside in medicine.
- 13 of the 29 blog posts publish the site's homepage title instead of their own - a template bug that is costing every one of them its click-through rate.
- The three richest pages are /project-showcase (4,203 words), /resources/project-ideas (3,622) and /junior-doctors (2,442). None of them rank for anything yet.
- Seven products here have no equivalent in the eighteen-programme catalogue: the masterclass series, pre-med club, camps, Harvard camp, Jesus College Cambridge camp, the MMI AI coach and Project Impact.

Content to absorb before cutover

- All 29 blog posts, slug for slug, with their titles rewritten - the template bug must be fixed on migration, not carried over.
- The project showcase gallery (4,203 words of real student output) into /medicine/student-projects.
- The full 1,840-word fellowship curriculum and the 2,442-word Junior Doctors page, checked line by line against the current landing pages.
- Both resource downloads - the 40-term medical vocabulary deck and the healthcare project ideas list - as working lead magnets.
- The MMI AI coach. It is an interactive tool with its own demand, not a page to redirect away.

Page mapping - every URL found (50 pages)

50 live URLs were crawled on this domain. 31 become guide articles, 0 should be left to 410 rather than redirected. Every row below is a real, rendered page - nothing is inferred.

Old URL (path)	Words	Destination	Note
/	998	/medicine	New medicine hub; inherits the brand's

Old URL (path)	Words	Destination	Note
/harvard-camp	122	/medicine#campus	Thin (122 words) - fold into the hub.
/jesuscollege-premed	998	/medicine#campus	Partner campus page; rebuild only if the partnership is live.
/jesuscollege-premed/apply	998	/apply?programme=future-doctors-fellowship	Single intake.
/junior-doctors	2442	/programmes/junior-doctor-fellowship	Direct programme equivalent (Grades 5-8).
/junior-doctors/apply	335	/apply?programme=junior-doctor-fellowship	Single intake, pre-filled.
/masterclass	731	/medicine/masterclass	Free masterclass is a live lead magnet - rebuild, do not drop.
/masterclass/apply	168	/medicine/masterclass#register	Registration collapses into the masterclass page.
/mmi	884	/medicine/mmi-coach	Interactive tool with its own demand - port it, do not redirect away.
/pre-med-club	667	/medicine#pre-med-club	Section on the hub; too thin for its own page.
/pre-med-club/apply	310	/apply?programme=junior-doctor-fellowship	Nearest live equivalent.
/programs	773	/finder?interest=med	Listing page maps to the filtered finder.
/project-impact	1509	/medicine/student-projects	Outcome proof - high AEO value.
/project-impact/apply	319	/apply?programme=future-doctors-fellowship	Single intake.
/project-showcase	4203	/medicine/student-projects	4,203 words of real student work - the richest page on the domain.
/resources/medical-vocabulary-deck	1309	/guides/pre-med-vocabulary-deck	Free download; keep the asset and the page.
/resources/project-ideas	3622	/guides/healthcare-project-ideas	3,622 words - strong list-intent guide.

5.2 futurelawyersprogram.com

Law satellite - 11 indexed pages, 18 keywords, no measurable traffic yet.

- The smallest server-rendered satellite: 11 live pages, and the homepage alone carries 3,451 words - more than the other ten combined.
- Holds position 5 for 'harvard future leaders in law' and 17 keywords in total, none on page one. Little to lose, so it is a good early move.
- /resources/best-pre-law-summer-programs-for-high-school-students (1,616 words) already ranks for 'law programs for high schoolers'. It is the only asset here with measurable pull.

- The Moot Court Championship has a full 1,161-word page here and no page at all in the eighteen-programme catalogue.

Content to absorb before cutover

- The 3,451-word homepage - it is effectively the law hub already written. Do not rebuild /law from scratch.
- The pre-law programme comparison guide, expanded rather than trimmed.
- Both blog articles (legal case brief, mock trial summer camp) - genuine search-intent pages.
- Moot Court Championship format, judging and past winners, if the competition continues.

Page mapping - every URL found (11 pages)

11 live URLs were crawled on this domain. 4 become guide articles, 0 should be left to 410 rather than redirected. Every row below is a real, rendered page - nothing is inferred.

Old URL (path)	Words	Destination	Note
/	3451	/law	New law hub.
/about	451	/about	Merge into single About.
/apply	245	/apply?programme=future-lawyers-fellowship	Single intake.
/blog	160	/guides/law	Blog index becomes the law guides index.

/blog/what-is-mock-trial-summer-camp	1476	/guides/what-is-mock-trial-summer-camp	Move article verbatim.
/competition	1161	/programmes/moot-court-championship	Needs a new programme page - no equivalent exists yet.
/competition/apply	207	/apply?programme=moot-court-championship	Single intake.
/masterclass	730	/law/masterclass	Live lead magnet - rebuild.
/masterclass/apply	154	/law/masterclass#register	Collapses into masterclass page.
/resources/best-pre-law-summer-programs-for-high-school-students	1616	/guides/best-pre-law-summer-programs	Ranks already; the single best asset on this domain.

5.3 joinfinlit.com

Finance satellite - 22 indexed pages, 60 keywords, ~17 visits/mo. Owns the estate's best competitive ranking.

- joinfinlit.com/competition ranks #3 for 'finance competitions' and #8 for 'harvard undergraduate trading competition', and holds 41% of the domain's traffic. It is the highest-value single page on any satellite.
- The FinLit brand name ranks #7 and the homepage carries the other 53% of traffic - the finance hub must own the name 'FinLit' explicitly, in its title and its copy.
- /mentors is 4,765 words of mentor detail, the strongest trust asset anywhere in the estate. /curriculum is 2,273 words of syllabus the destination programme page does not currently have.
- Two products here are missing from the catalogue: the Business & Finance Challenge and the student Lab. /scholarship is 46 words and /brand is an internal brand book.

Content to absorb before cutover

- The 2,273-word curriculum into the FinLit fellowship page, before any redirect fires.
- Competition rules, judging criteria and prior results into the Wolves of Wall Street page - it must be demonstrably richer than the page it replaces.
- The 4,765-word mentor playbook into /about#mentors.
- All four blog articles plus the 1,744-word teen personal-finance course page.
- The privacy and terms text, which the destination site does not have at all.

> **Do this one last**
> Because /competition is the only satellite page holding a genuinely competitive top-three position, it carries the most downside risk. Move joinfinlit.com after at least two other domains have completed a clean cutover, and only once the Wolves of Wall Street page is demonstrably richer than the page it replaces.

Page mapping - every URL found (24 pages)

24 live URLs were crawled on this domain. 5 become guide articles, 1 should be left to 410 rather than redirected. Every row below is a real, rendered page - nothing is inferred.

Old URL (path)	Words	Destination	Note
/	1401	/finance	New finance hub; inherits 'finlit' brand queries.
/about	899	/about	Merge into single About.
/apply	120	/apply?programme=finlit-fellowship-capital-minds	Single intake.
/blog	270	/guides/finance	Blog index becomes the finance guides index.
/blog/finance-summer-programs-high-school-comparison-guide	1466	/guides/finance-summer-programs-high-school-comparison-guide	Move article verbatim.
/blog/investing-for-teens-beginners-guide	1417	/guides/investing-for-teens-beginners-guide	Move article verbatim.

Old URL (path)	Words	Destination	Note
/blog/student-money-management-101	1141	/guides/student-money-management-101	Move article verbatim.
/brand	1006	410 / no redirect	Internal brand book - 410 and remove from any index.
/business-fin-challenge	1575	/programmes/business-and-finance-challenge	New programme page needed.
/business-fin-challenge/apply	79	/apply?programme=business-and-finance-challenge	Single intake.
/competition	1724	/programmes/wolves-of-wall-street-competition	Direct equivalent; ranks #3 for 'finance competitions' - highest-value URL on the domain.
/competition/apply	80	/apply?programme=wolves-of-wall-street-competition	Single intake.
/curriculum	2273	/programmes/finlit-fellowship-capital-minds#curriculum	2,273 words of syllabus detail the hub page currently lacks.
/fellowship	1114	/programmes/finlit-fellowship-capital-minds	Direct equivalent.
/for-educators	813	/for-schools	New schools page consolidates every satellite's educator pitch.
/lab	488	/finance/student-projects	Student output proof.
/lab/view	1401	/finance/student-projects	Duplicate shell of /lab - one destination.
/masterclass	618	/finance/masterclass	Live lead magnet - rebuild.
/masterclass/apply	49	/finance/masterclass#register	Collapses into masterclass page.
/mentors	4765	/about#mentors	4,765 words of mentor detail - strongest trust asset here.
/personal-finance-course-for-teens	1744	/guides/personal-finance-course-for-teens	Keyword-led landing page; keep as a guide, not a duplicate programme page.
/privacy	65	/privacy	Consolidate to one policy.
/scholarship	46	/apply#scholarship	46 words - too thin to keep as a page.
/terms	58	/terms	Consolidate to one policy.

5.4 joinonwards.com

Multi-track satellite - 58 live pages, all client-rendered. 6 keywords, effectively zero organic visibility.

- The largest satellite by page count and the weakest by performance, for one reason: every one of its 58 URLs serves the same HTML shell and the same H1. Google has never seen the real pages.
- /projects is 12,215 words of student work - the single richest page across all nine properties, and completely invisible to search today.
- Other substantial pages Google cannot read: /how-it-works (3,268 words), /playbooks/linkedin (3,799), /india, /dubai, /us, /china and /nord-anglia (~3,240 each).
- It is the only domain in the estate publishing llms.txt - rebuild that at the canonical domain rather than redirecting it.
- Hosts 21 school and region landing pages used by the sales team. Four of them (/panama, /thailand-2026, /onward-asia, /dps-east-bangalore, /gems-abu-dhabi) render only the 840-word shell, meaning they are empty even in a browser - confirm whether those partnerships are live before rebuilding them.

Content to absorb before cutover

- The 12,215-word projects page. This alone justifies the migration effort for this domain.
- The pathways framework and /how-it-works - a better-articulated version of what /profile-building says now.
- The 3,799-word LinkedIn playbook as a standalone guide.
- /outcomes and /partners, which contain real proof, into the leadership hub and /about#partners.
- The llms.txt file, rewritten for the merged catalogue.

The 21 school and region pages

These are not search assets; they are sales collateral with a URL. They rank for nothing and are usually shared by link. Three options, in order of preference:

- Rebuild them as /schools/<partner> on the canonical domain and redirect one-to-one. Keeps the sales workflow intact and consolidates the domain fully.
- Leave joinonwards.com serving only these pages, noindexed, and redirect everything else. Lowest effort, but the domain stays alive and needs maintenance.
- Redirect them all to /for-schools. Simplest, but every partner link in circulation loses its personalisation - not recommended while these pages are in active use.

Named school partners: /cognita-latam, /dunalastair, /dps-east-bangalore, /gems-abu-dhabi, /hd-shanghai (+ /apply, /stem, /leadership), /kingsschool-albarsha (+ /apply, /stem, /leadership, /entrepreneurship), /nord-anglia, /taiwan-fushing, /waad-education, /ywies. Region cohorts: /africa-online, /aga-khan, /brazil-2026, /china, /dubai, /india, /us, /saudi, /panama, /thailand-2026, /onward-asia.

Page mapping - every URL found (58 pages)

58 live URLs were crawled on this domain. 1 become guide articles, 1 should be left to 410 rather than redirected. Every row below is a real, rendered page - nothing is inferred.

Old URL (path)	Words	Destination	Note
/	2056	/leadership	New leadership hub; inherits 'onward program' queries.
/6-weeks	2345	/programmes/onward-6-week-programme	Direct equivalent.
/6-weeks/apply	1237	/apply?programme=onward-6-week-programme	Single intake.
/6-weeks/entrepreneurship	1868	/programmes/onward-6-week-programme#pathway-entrepreneurship	Pathway variant - anchor, not a separate page.
/6-weeks/leadership	1904	/programmes/onward-6-week-programme#pathway-leadership	Pathway variant - anchor, not a separate page.
/6-weeks/stem	1500	/programmes/onward-6-week-programme#pathway-stem	Pathway variant - anchor, not a separate page.
/about	1274	/about	Merge into single About.
/africa-online	3159	/leadership/africa-online	Geography cohort page - keep only if a live cohort exists, else redirect to /leadership.
/aga-khan	2810	/leadership/aga-khan	Geography cohort page - keep only if a live cohort exists, else redirect to /leadership.
/brand-guidelines	840	410 / no redirect	Internal asset - 410.

/ywies	3090	/for-schools/ywies	Named school partner page - private-audience landing, keep noindex.

5.5 sirluthercenter.com

Research satellite - 66 live pages: 37 server-rendered blog articles and 29 client-rendered application pages. 87 keywords, ~44 visits/mo. The highest-traffic satellite.

- This domain is split in two. Its 37 blog articles are properly server-rendered and carry effectively all of its traffic; its 29 programme, tool and portal pages are a JavaScript shell that Google reads as one duplicate page repeated 29 times.
- /blog/science-fair-project-ideas-for-high-school-students holds 99.95% of the domain's organic traffic on its own, across 22 ranking keywords, best position #3. It is 2,629 words. Nothing else here is close.
- The blog is deep as well as strong: 'how to publish research as a high school student', 'summer research programs 2026', 'is high school research worth it' and 'best research programs 2026' are all 1,300–1,900-word articles matching real parent and student queries.
- /papers is 6,738 words of published student research - the most concrete, checkable proof the business owns anywhere. It is currently unreadable by search engines.
- Runs a live portal with four login routes and an interactive /topic-finder.

Content to absorb before cutover

- All 37 blog posts, slug for slug, into /guides. This is the largest work item in the migration and the one with the clearest payoff.
- The 6,738-word published-papers library into /research/published-papers, with the same student and journal detail intact.
- The topic finder and the journals directory, rebuilt as working tools rather than redirected away.
- /what-is-a-research-mentorship-program - a definition page, and prime material for AI answer engines.
- Teacher resources and the schools pitch into the new /for-schools section.

> **This domain hosts a live application, not just a website**
>
> sirluthercenter.com serves /login, /admin/login, /mentor/login and /school/login. Students, mentors and schools are using it now.
>
> Do not point this domain's DNS at the new site until the portal has a permanent home - either a subdomain such as portal.sirluthercenter.com, or a rebuilt equivalent on the canonical domain. Redirect the marketing paths only, and leave the portal paths untouched in the redirect map.

Page mapping - every URL found (64 pages)

64 live URLs were crawled on this domain. 38 become guide articles, 4 should be left to 410 rather than redirected. Every row below is a real, rendered page - nothing is inferred.

Old URL (path)	Words	Destination	Note

5.6 satinstinct.com

Test prep satellite - 51 live pages, none of them crawlable. 4 keywords, no page-one positions.

- The starkest case in the estate. A plain crawler finds exactly one page here, because the homepage serves no followable links until JavaScript runs. Rendered in a browser, the site has 51 pages including 20 blog articles.
- It has the best-structured content architecture of any satellite - an 11-trap pillar page (/sat-trap-types, 2,588 words) with a matching article for each trap - and search engines cannot see any of it.
- It also duplicates itself: 12 short /traps/<name> stubs (~400 words each) repeat the same 12 blog articles, and there are two broken duplicates - /traps/out-of_scope (underscore typo) and /blog/unit-trap-trap.
- Because nothing here ranks and nothing here is indexed, this is the correct pilot domain for the whole migration. There is no downside to test with.

Content to absorb before cutover

- The /sat-trap-types pillar page plus all 20 blog articles - consolidating the 12 thin /traps/ stubs into the pillar as you go.
- The 10-week curriculum and schedule detail into the SAT Instinct programme page.
- The PSAT page, which targets a genuinely separate query set.
- Both free downloads (flashcards, trap reference) as working lead magnets on /test-prep/free-resources.

> **The mapping below was built by rendering every page in a browser**
>
> The 51 URLs in the table were discovered by loading the site in a real browser and following the links JavaScript creates. That is also how Googlebot would have to discover them, and it is why so little of this site is indexed.
>
> Because the site returns HTTP 200 for any path, the app owner should still confirm the list against the platform's own route table before cutover - and add the redirect map at the server, not in the app.

Page mapping - every URL found (51 pages)

51 live URLs were crawled on this domain. 35 become guide articles, 4 should be left to 410 rather than redirected. Every row below is a real, rendered page - nothing is inferred.

/traps/variable-swap	410	/guides/sat-trap-types#variable-swap	~400-word stubs duplicating the blog articles; consolidate into the pillar.

5.7 purposeplaybook.ai

Project-ideas tool - 8 real pages plus 207 client-rendered project URLs. Not indexed by Semrush at all.

- This is not a programme site. It is a project-idea generator: a library of 207 student project ideas, each with a build outcome, skills list and getting-started steps.
- Every one of the 207 /library/<uuid> URLs renders about 250 words in a browser and 13 words to a crawler, all under the same title. As far as search is concerned, this domain does not exist.

- The /library index itself renders 5,992 words and is genuinely useful content - the kind of list page that attracts links and AI citations.
- There is no ranking risk in moving it, so it should go early, straight after the pilot.

Content to absorb before cutover

- The 207 project ideas, rebuilt as one server-rendered, filterable guide at /guides/student-project-ideas. Do not recreate 207 UUID URLs - they would be 207 thin pages on a domain you care about.
- The five track framings (middle school, high school, competition, university portfolio, social impact) into /profile-building, which already covers this intent.
- The personalised-plan generator, if it is to continue, as a tool behind an email capture.

Page mapping - every URL found (8 pages)

8 live URLs were crawled on this domain. 2 become guide articles, 1 should be left to 410 rather than redirected. Every row below is a real, rendered page - nothing is inferred.

Old URL (path)	Words	Destination	Note
/	13	/profile-building	Existing page already covers this intent.
/about	13	/about	Merge into single About.
/auth	13	410 / no redirect	App login - noindex.
/library	13	/guides/student-project-ideas	5,992 words across 207 project ideas - rebuild as one filterable guide, server-rendered.
/pricing	13	/profile-building	Thin shells - single destination.
/privacy	13	/privacy	Consolidate to one policy.
/terms	13	/terms	Consolidate to one policy.
/library/<uuid> (207 URLs)	250	/guides/student-project-ideas	207 client-rendered UUID URLs, ~250 words each, no crawlable titles. Do not recreate per-project URLs.

6. The destination site, page by page

This is the current catalogue app. Everything here becomes the destination for the redirects in Section 5, so each page has to earn the traffic it inherits.

Route	Search intent	Current title	What to change	Linking role
/	Brand + 'programmes for high school students'	Learn with Leaders - Harvard & Yale-mentored programmes, Grades 5–12	Good. Add Organization + WebSite schema and an absolute canonical.	Links to every hub, finder, calendar.
/finder	'find a programme', long-tail interest + grade	Programme Finder | Learn with Leaders	Add ItemList schema for the visible results; make filter states shareable URLs so hubs can link into them.	Receives /programs, /pathways, /competitions redirects.
/calendar	'programme dates', 'cohort calendar'	Full Calendar 2026–27 | Learn with Leaders	Add Event schema per cohort - this is what AI engines quote for dates.	Links out to every programme page.
/calendar-month	Same intent as /calendar	Month-by-month cohort calendar	RISK: near-duplicate of /calendar. Pick one canonical view and canonicalise the other to it.	Internal only.
/programmes/<18 slugs>	Programme name + 'harvard <subject> program'	Auto-built from name, kind, grades	Strongest pages on the site. Add absolute canonical, Course + FAQPage schema (FAQ already present), and an og:image per programme.	Primary redirect destination for all satellites.
/about	Brand trust, 'is learn with leaders legit'	About Learn with Leaders - press, schools and student stories	Good. Add #mentors and #partners anchors (redirect targets).	Receives /about, /mentors, /partners.
/profile-building	'how to build a college profile'	Profile Building Explained	High AEO value. Add question-shaped H2s and FAQPage schema.	Receives /how-it-works, /projects.
/testimonials	'learn with leaders reviews'	Student & parent testimonials	Add Review/AggregateRating schema only if the reviews are genuinely verifiable.	Receives /outcomes, /alumni, /student-showcase.
/fit	'which programme is right for my child'	Find the right programme for your child	Keep indexable; it is a strong entry point. Result URLs should be shareable.	Receives /get-started.
/internships, /internships/apply	'education internship remote'	Internships - Learn with Leaders	Already has absolute canonicals and JobPosting-adjacent schema. Consider real JobPosting markup.	Standalone.
/shortlist	None (private)	My saved programmes	Correctly noindex. Leave as is.	Standalone.

Route	Search intent	Current title	What to change	Linking role
/stories	-	No head() at all	BROKEN: legacy route with no metadata. Redirect it to /testimonials or delete it.	Should not exist.

6.1 Technical gaps to close before any cutover

1. Ship /sitemap.xml covering every route plus all eighteen programme pages, and add a Sitemap: line to robots.txt. Neither exists today.
2. Give every route an absolute canonical on the chosen domain. Today five routes have canonicals, three of them relative and two pointing at lwlschoolaccess.com - which will be the wrong domain if learnwithleaders.com wins.
3. Add Organization schema with sameAs links, plus BreadcrumbList on programme pages, alongside the existing Course and FAQPage markup.
4. Resolve the /calendar and /calendar-month duplication. Two routes describing the same cohort data will split their own ranking.
5. Delete or redirect /stories - a legacy route with no metadata at all.
6. Add per-programme og:image. Every programme page currently inherits whatever the platform supplies, so shared links look identical.
7. Publish llms.txt at the canonical domain, listing the hubs, the eighteen programmes and the guides library.

7. Cutover runbook

Run this sequence once per domain. Do not parallelise the first two.

#	Step	When
1	Verify the old domain in Google Search Console and export a 3-month baseline of clicks, impressions and top pages.	Before any change
2	Confirm every destination page for that domain is live, indexable, and at least as detailed as the page it replaces.	Before any change
3	Install the 301 map at the domain's host or DNS provider. Unmatched paths fall back to that domain's subject hub - never the homepage.	Cutover day
4	Test: curl -I every old URL. Confirm a single 301 and the exact Location header. No chains, no 302s, no redirect loops.	Cutover day
5	Submit Change of Address in Search Console from the old property to the new one.	Cutover day
6	Submit the new sitemap and request indexing for the top 10 destination URLs.	Cutover day
7	Watch daily for 14 days: crawl errors, indexed page count on both properties, clicks on the destination URLs.	Days 1–14
8	Only then start the next domain.	Day 15+

7.1 Recommended order

Order	Domain	Why here
1 - Pilot	satinstinct.com	Smallest, lowest risk, nothing on page one. Proves the process.
2	purposeplaybook.ai	No search presence at all. Zero downside.
3	futurelawyersprogram.com	Real rankings but none on page one - upside without exposure.
4	joinonwards.com	Largest page count, near-zero traffic. Big job, small risk. Resolve the school pages first.
5	futuredoctorsprogram.com	Real rankings and a high-value blog post. Move once the guides library is proven.
6	sirluthercenter.com	Highest traffic and a live portal. Only after all 40 posts are migrated and the portal is rehomed.
7 - Last	joinfinlit.com	Holds the only competitive top-three ranking in the estate.

7.2 Stop signals

Signal	Threshold	First thing to check
Traffic drop	Destination clicks are down more than 50% against the old baseline after 21 days.	Check for redirect chains and thin destination pages before assuming Google is slow.
Indexing stall	Fewer than 60% of destination URLs indexed after 28 days.	Usually a sitemap, canonical or internal-linking problem.

Signal	Threshold	First thing to check
Wrong page indexed	Google shows the hub where a programme page should rank.	The programme page is too thin or the redirect points at the hub.
Soft 404s	Search Console reports soft 404s on destination URLs.	The destination is a filtered view with no unique content. Build a real page.

7.3 Verification commands

Run these against every mapped URL on cutover day. A single 301 and an exact Location header is the only passing result.

```
curl -sSI https://old-domain.com/old-path | grep -Ei '^(HTTP|location)'
# expect exactly: HTTP/2 301  +  location: https://new-domain.com/new-path
```

8. Off-site work

Redirects move pages. They do not move mentions. Every item below points at a satellite today and will keep doing so until someone changes it by hand.

Surface	What to change	When
Social bios	LinkedIn, Instagram, YouTube, X - every profile linking to a satellite.	Week 1 of each cutover
Brochures and PDFs	Drive-hosted flyers and brochures referenced in the calendar all carry satellite URLs.	Before cutover - PDFs cannot be redirected once downloaded
Email signatures and templates	Sales and admissions templates.	Week 1
Google Ads and paid social	Redirected ad destinations can be disapproved. Rewrite final URLs.	Cutover day, not after
Press and partner links	Forbes and similar coverage, school partner pages, Harvard/Yale society pages.	Ongoing - ask for direct link updates
Google Business Profile	Website field and post links.	Week 1
Directory and spam links	See the toxic backlink warning in Section 2.	Audit before, not after

A direct link is worth more than a redirected one, so partner and press updates are worth chasing individually. Start with the highest-authority referrers - press coverage, university society pages, and partner schools - and ignore the directory links entirely.

9. Answer engines (ChatGPT, Perplexity, Gemini)

AI answer engines behave differently from Google in one way that matters here: they pick a single authoritative source per entity and cite it. Seven thin sites describing the same eighteen programmes give them nothing to anchor to. Consolidation alone is the highest-impact AEO action available to this business.

Requirement	What it means in practice	Current state
One canonical fact block per programme	Dates, fee, grades, duration, format and mentor university in readable text AND structured data on the programme page.	Mostly done - Course + FAQ schema exists. Add Event per cohort.
Consistent naming	'FinLit Fellowship (Capital Minds)' must be the same string on every page, brochure and social bio.	Currently varies between the catalogue and the satellites.
Question-shaped headings	'What does the Future Doctors Fellowship cost?', 'Is it accredited?', 'What does my child produce?'	Partially present in the FAQ blocks - promote to H2s.
llms.txt	A plain-text map of the site for AI crawlers. joinonwards.com already has one; the hub does not.	Rebuild at the canonical domain.
Entity markup	Organization schema with sameAs links to LinkedIn, Instagram and press coverage.	Missing. Add to the root route.
Cited proof	Published student papers, named mentors, named schools - the facts AI engines quote.	/papers rebuild covers this.

The practical test: ask ChatGPT and Perplexity 'what does the Future Doctors Fellowship cost and who runs it?' before the merge, and again ninety days after. If the answer names Learn with Leaders and quotes the right fee from one page, the structure is working.

10. Where applications should land

Recommendation: one shared intake at /apply on the canonical domain, pre-filled with the programme and cohort from the URL, with the Calendly advisor booking as the secondary path for parents who want to talk first.

Why

- Every satellite currently runs its own /apply page. Leads arrive in separate inboxes with no shared source attribution, so nobody can say which programme page or which article produced them.
- A parent who reads a programme page on one domain and then lands on an unfamiliar domain to apply drops out. Same-domain conversion is measurably better and, after the merge, it is free.
- A single form means a single tagged record: programme, cohort, grade, region, referring page. That is the difference between guessing and knowing which content sells.

Exceptions

- Where a partner legally owns registration - the Yale IR essay competition already routes to a Google Form owned by YIRA - keep the external link and label it clearly as a partner registration.
- Where a competition has its own judging platform, link out after capturing the enquiry, not before.

Implementation note

A submissions table on Lovable Cloud behind the form makes applications queryable rather than only emailed - so 'how many Grade 9 medicine enquiries came from the science fair article' becomes a question with an answer.

Appendix A - Consolidated redirect map

Section 5 already lists every URL, one row per page - 268 rows in total. This appendix is the summary count, and the same map is supplied alongside this document as LWL-redirect-map.csv for direct import into a host or edge configuration.

Domain	URLs mapped	Guides	410s	Destination trees used
futuredoctorsprogram.com	50	31	0	/medicine, /about, /guides, /programmes, /apply, /finder
futurelawyersprogram.com	11	4	0	/law, /about, /apply, /guides, /programmes
joinfinlit.com	24	5	1	/finance, /about, /apply, /guides, /programmes, /for-schools, /privacy, /terms
joinonwards.com	58	1	1	/leadership, /programmes, /apply, /about, /for-schools, /finder, /guides
sirluthercenter.com	64	38	4	/research, /about, /testimonials, /guides, /apply, /programmes, /privacy, /for-schools, /terms
satinstinct.com	51	35	4	/test-prep, /apply, /guides, /programmes, /for-schools
purposeplaybook.ai	8	2	1	/profile-building, /about, /guides, /privacy, /terms

Migration priority for the guides library, highest value first: sirluthercenter /blog/science-fair-project-ideas-for-high-school-students; futuredoctors /blog/what-does-pre-med-actually-mean; satinstinct /sat-trap-types; sirluthercenter /blog/best-research-programs-for-high-school-students-2026, /blog/summer-research-programs-for-high-school-students-2026 and /blog/how-to-publish-research-as-high-school-student; futurelawyers /resources/best-pre-law-summer-programs-for-high-school-students; joinonwards /playbooks/linkedin; then the remainder in any order.

Fix these duplicates before migrating, not after

satinstinct.com: /traps/out-of_scope duplicates /traps/out-of-scope (underscore typo), and /blog/unit-trap-trap duplicates /blog/unit-trap. The twelve /traps/<name> stubs duplicate twelve blog articles - consolidate them into /guides/sat-trap-types.

joinfinlit.com: /lab and /lab/view render the same page.

learnwithleaders.com: ten conference pages share the title 'Harvard World Model United Nations', and twelve invalid paths serve the homepage at HTTP 200 (Section 2.7).

This app: /calendar and /calendar-month are near-duplicates, and /stories has no metadata at all.

Appendix B - DNS reference

For any domain pointed at a Lovable-hosted site:

Record	Name	Value
A	@ (root)	185.158.133.1
A	www	185.158.133.1
TXT	_lovable	provided per domain in Project Settings → Domains

- Add the root and the www version as separate entries; www is not added automatically. Set one as primary and the other redirects to it.
- Remove conflicting A records from previous hosts before pointing a domain, or verification stalls.
- Behind Cloudflare or a similar proxy, tick 'Domain uses Cloudflare or a similar proxy' in the connect dialog to switch to CNAME-based verification.
- Allow up to 72 hours for propagation. SSL is provisioned automatically once verification passes.
- The 301 rules themselves are configured at each old domain's host or edge, not inside the destination app.

Appendix C - Pre-cutover checklist

- ☐ Canonical domain decided and written into every canonical tag on the destination site.
- ☐ sitemap.xml live and submitted; robots.txt references it.
- ☐ All destination pages for this domain live, indexable and richer than the pages they replace.
- ☐ Blog posts for this domain migrated with matching slugs.
- ☐ Old domain verified in Search Console with a 3-month baseline exported.
- ☐ Redirect map reviewed line by line; no destination is the homepage.
- ☐ No redirect chains; every hop tested with curl.
- ☐ Application flow tested end to end on the destination.
- ☐ Login and portal paths explicitly excluded from the redirect map.
- ☐ Google Ads final URLs rewritten.
- ☐ Social bios and brochure links updated.
- ☐ Change of Address submitted.
- ☐ Monitoring calendar set for daily checks over 14 days.

Appendix D - Decisions still open

#	Decision	Blocks
1	Canonical domain: learnwithleaders.com or lwlschoolaccess.com.	Every canonical tag, every mapping table, the sitemap.
2	The fifteen off-catalogue products (5 masterclass funnels, 3 camps, pre-med club, Global Impact Fellowship, Moot Court Championship,	About 30 redirect destinations.

#	Decision	Blocks
	Business & Finance Challenge, Onward LaunchPad, FinLit Lab, Project Impact): add, retire or fold into hubs.	
3	The 21 joinonwards school and region pages: rebuild, retain or collapse. Five render empty even in a browser - confirm which partnerships are live.	The joinonwards cutover.
4	Where the sirluthercenter portal (4 login routes) and the satinstinct portal (3 login routes) live after the merge.	The sirluthercenter cutover - the highest-traffic domain.
5	Whether the 207 purposeplaybook project ideas become one filterable guide (recommended) or individual pages.	The purposeplaybook mapping and the guides build.
6	Whether the WordPress hub is replaced by this app or kept alongside it.	The whole architecture - see Section 1.

Nothing in Section 4 depends on any of these except the canonical domain. Recommended start: decide item 1, then build the sitemap, the subject hubs and the guides library while the remaining decisions are made.
